carcinoma, Bladder carcinoma, Brain oligodenroga;
NCI_CGAP_Sub9 is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are CGTC, AACG, GGGCC,
GGAAG, TAGC, TAGC, ATGG, AGACA, ATCAC. For additional
information. contact: Hento, Soares, bento-soaresmitons adv

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pool of mRNA from 2 cell lines from Enchondroma tissues. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an Eog I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CGGTCACTC. The cell lines were provided by Dr.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TAG_TISSUE=Enchondroma cell line (Mix of EN1 and EN2)

//clone lib="Soars mixed (see below); Vector: pT7T3D-Pac
//note="Organ: mixed (see below); Vector: pT7T3D-Pac
(Pharmacia) with a modified polylinker; Site 1: Not I;
Site 2: Eco RI; Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NbHPU, and fetal heart NbHH19W) were mixed, and se circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260232-265223,
340488-345479, and 494488-489479."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel transforming growth factor (TGF)-betal binding reagent which comprises a glycosylphosphatidyl inositol (GPI)-anchored TGF-betal binding protein referred to as r150 which acts as an accessory receptor of TGF-beta. The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is human r150 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel transforming growth factor (TGF)-beta 1 binding reagent which comprises r150 protein which acts as accessory receptor of TGF-beta, useful for negatively modulating TGF-beta activity, and thus for treating cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 94-99; 127pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for treating or detecting a disease or disorder, e.g. conditions associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic system, activation of Tlymphocytes and of the complement system, quantitative or qualitative abnormalities of platelet function, increased or impaired platelet aggregation and activation, increased or impaired activation of the coagulation and/or fibrinolytic systems, or impaired activation of the coagulation. These are also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolism, peripheral vascular disease, thrombocytopenia, thrombocytopenia, autoimmune diseases, organ transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for treating these conditions. The present sequence represents the human conjoc at the conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated nucleic acid molecules encoding CD109 polypeptides. These nucleic acid molecules include the human cDNA sequences comprising CD109 K1, CD19 K1-K7, CD109 K15 or their variants. CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 family of thioester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid, CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New CD109 nucleic acids and polypeptides, useful in gene therapy, particularly for treating strokes, myocardial infarctions, thrombosis, thrombocytopenia, autoimmune diseases, or organ or bone marrow transplantation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 21; Fig 3a; 156pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-MAR-2001; 2001US-273814P

                                                                                                                                                                                         for treating or detecting a disease or disorder, e.g. conditions associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic systems, activation of Tymphocytes and of the complement system, quantitative or qualitative abnormalities of platelet function, increased or impaired platelet aggregation and activation, increased or impaired activation of the coagulation and/or fibrinolytic systems, or impaired activation of the coagulation. These are also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolism, peripheral vascular disease, thrombocytopenia, thrombocytopenia, autoimmune disease, organ transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for treating these conditions. The present sequence represents the human
                                                                                                                                                                              or their antisense nucleotide sequence treating these conditions. The present CD109 K1-H7 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated nucleic acid molecules encoding CD109 polypeptides. These nucleic acid molecules include the human cDNA sequences comprising CD109 K1, CD109 K1-F1, CD109 K15 or their variants. CD109 is a novel member of the alphaz macroglobulin (alphazM)/C3, C4, C5 family of thioester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid, CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New CD109 nucleic acids and polypeptides, useful in gene therapy, particularly for treating strokes, myocardial infarctions, thrombosis, thrombocytopenia, autoimmune diseases, or organ or bone marrow transplantation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CD109; alpha2 macroglobulin; thioester; cerebroprotective; cardiant; immunosuppressive; haemostatic; anticoagulant; thrombolytic; human; cardiovascular; vasotropic; gene therapy; CD109 K1-H7.

  The present invention relates to a sequence capable off binding specifically to a CD109 nucleic acid which has a single nucleotide polymorphism that distinguishes the Gova and Govb alleles. Detection of the Gov genotype is useful for detecting whether the subject has or is at risk of a blood disease, disorder or abnormal physical state, such as bleeding, or increased risk of bleeding, due to alloimmune destruction of blood platelets, e.g., post-transfusion purpura, post-transfusion platelet refractoriness or neonatal alloimmune thrombocytopenia. The nucleic acid and polypeptide are useful for Gov genotyping or phenotyping individuals. The present sequence is the Gova encoded protein.
                                                                                                                                                                                                                                                                                                                              thrombocytopenia
                                                                                                                                                                                                                                                                                                                                               New isolated oligonucleotide binding to a region of CD109 nucleic acid having a single nucleotide polymorphism that distinguishes a Gova hand/or Govb allele, useful for treating blood disorders e.g. alloimmune that the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state o

comprises r150 protein which acts as accessory receptor of TGF-beta, useful for negatively modulating TGF-beta activity, and thus for treating cancer -
```

Claim 1; Page 103-109; 127pp; English

The invention relates to novel transforming growth factor (TGF)-betal binding reagent which comprises a glycosylphosphatidyl inositol (GPI)-anchored TGF-beta binding protein referred to as r150 which acts as an accessory receptor of TGF-beta. The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is human r150 protein.

for treating or detecting a disease or disorder, e.g. conditions associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic systems, activation of Tlymphocytes and of the complement system, quantitative or qualitative abnormalities of platelet function, increased or impaired platelet aggregation and activation, increased or impaired or increased immune activation and/or fibrinolytic systems, or impaired or increased immune activation. These are also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolism, peripheral vascular disease, thrombocytopenia, thrombocythemia, autoimmune diseases, organ transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for
                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated nucleic acid molecules encoding CD10: polypeptides. These nucleic acid molecules include the human cDNA sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variant; CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, (family of thioester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid, CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New CD109 nucleic acids and polypeptides, useful in gene therapy, particularly for treating strokes, myocardial infarctions, thrombosis, thrombocytopenia, autoimmune diseases, or organ or bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (SCHU/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 21; Fig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              transplantation -

for treating or detecting a disease or disorder, e.g. conditions can be associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic systems, activation of T lymphocytes and of the complement system, quantitative or qualitative abnormalities configuration, increased or impaired platelet aggregation and activation, increased or impaired or increased immune activation and/or fibrinolytic systems, or impaired or increased immune activation. These are also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolism, peripheral vascular disease, thrombocytopenia, thrombocythemia, autoimmune diseases, organ transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for treating these conditions. The present sequence represents the human conditions. The present sequence represents the human conditions. The invention relates to isolated nucleic acid molecules encoding CD10 polypeptides. These nucleic acid molecules include the human cDNA sequences comprising CD109 K1. CD109 K1. CD109 K15 or their variant. CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, Camily of thiosester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid. CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful variants. C3, C4, C5
